

Trace审计证据链

a) Runtime Input

Proxy: risk flags

Pre gate: RBAC/Schema

Tool exec: provider latency

Post gate: redaction/block

b) Trace Evidence Output

z1 输入扫描

risk score / decision / matched rule

z2 工具门控

tool name / args / RBAC / confirmation

z3 输出清洗

redaction / block_output / sanitized preview

(s,a) 审计结论

why blocked / where blocked / real tool executed?

Trace 将输入扫描、工具计划、前置门控、工具执行、后置清洗和最终回复串成可复核证据链。
